

Notes to Non-consolidated Financial Statements

1. Basis of Presentation

Amounts denominated in U.S. dollars are converted into yen on the basis of this Bank's posted median market rate of ¥111.00 to US\$1.00, the rate prevailing on March 29, 2019.

Amounts less than one million yen have been omitted. As a result, the totals in Japanese yen shown in the financial statements do not necessarily agree with the sum of the individual amounts.

2. Significant Accounting Policies

a) Depending on the type, securities are stated using the following methods. Held-to-maturity bonds are stated at moving average amortized cost (straight-line method). Shares in subsidiaries are stated at moving average cost. Available-for-sale securities with market value are stated at market value based on their price at the year end (sale cost is generally calculated as moving average cost), while those with no market value are stated at moving average cost. Valuation differences of available-for-sale securities are directly charged or credited to the shareholders' equity.

b) The depreciation of tangible fixed assets is stated using the declining balance method. However, buildings acquired after April 1, 1998 (except appurtenant facilities and equipment) and appurtenant facilities/equipment and structures acquired after April 1, 2016 are accounted for under the straight-line method. The service life for these items is as follows:

Buildings: 15-50 years

Other: 5-20 years

c) The Reserve for Possible Loan Losses of the Bank is provided based on the predetermined rules for write-offs and provisioning.

The reserve for possible loan losses for legally/substantially bankrupt borrowers is provided based on the amount after deductions of the expected collectable amount through the disposal of collateral or through the execution of guarantees.

The reserve for possible loan losses for borrowers who are not currently legally bankrupt but are likely to become bankrupt is provided based on the amount considered to be necessary, based on the overall solvency assessment of the amounts after deductions of the expected collectable amount through the disposal of collateral or through the execution of guarantees.

The reserve for possible loan losses on loans to other than the above is provided based on the actual loan loss rates observed in a certain period in the past.

All loans are assessed by branches and business departments based on internal rules for the self-assessment of assets. The Audit Department, independent of the branches and business departments, audits the results of the self-assessment of assets.

In the case of loans extended by the Bank to borrowers who are classified as legally/substantially bankrupt, the amount remaining after deductions of the amount of collateral considered to be disposable and the amount recoverable under guarantees is set off from the original outstanding loan balance. The amount of such write-offs totaled ¥33,442 million in the year ended March 31, 2019.

d) The reserve for retirement allowances is calculated based on the projected benefit obligation and the estimated amount of pension assets at the end of the current business year. In calculating the projected benefit obligation, the method of

attributing the estimated value of retirement benefits to the period up to the current business year conforms to standards for a periodic fixed-amount benefit. The methods of recognizing past service cost and actuarial gain or loss are as follows:

Past service cost: Recognized by the straight-line method over 10 years, which is the estimated average remaining years of service of the employees at the time cost is incurred.

Actuarial gain or loss: Amount distributed by the straight-line method over 10 years, which is the estimated average remaining years of service of the employees at the time the gain or loss is incurred in each business year, is recognized from the following business year after each gain or loss is incurred.

e) Based on the Act on Revaluation of Land (Act No. 34 of March 31, 1998), the Bank revalued its land used for business operations. The difference in taxes based on the resulting difference in valuation was appropriated under liabilities as a "deferred tax liability related to land revaluation." The revalued amount with the aforementioned difference in taxes subtracted was appropriated under net assets as "excess of land revaluation." Date of revaluation: March 31, 1999.

Method of revaluation, as stipulated in Article 3, Section 3 of the Act on Revaluation of Land: a reasonable value is determined using the official method stipulated by the Director-General of the National Tax Administration Agency for the calculation of the value of land that forms the basis of calculation of land taxes under Article 16 of the Land Prices Act.

Difference between the total current value at end of the fiscal year under review of land used for operations and the total book value of said land used for operations, after revaluation as stipulated in Article 10 of the Land Prices Act: ¥5,195 million.

f) The breakdown of the principal sources of deferred tax assets is as follows.

Deferred tax assets	
Reserve for possible loan losses:	¥10,159 million
Reserve for retirement allowances:	¥358 million
Tax loss carried forward	¥288 million
Other:	¥2,537 million
Deferred tax assets – Subtotal:	¥13,344 million
Valuation reserve:	(¥4,937 million)
Deferred tax assets – Total:	¥8,407 million
Deferred tax liabilities	
Land appraisal profit:	¥121 million
Valuation differences of available-for-sale securities:	¥1,549 million
Reserve for accelerated depreciation of land:	¥ 284 million
Deferred tax liabilities – Total:	¥1,955 million
Deferred tax assets – Net:	¥6,451 million

g) Net income per share is ¥15.23.
